### DETAILED ACTION

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors, e.g., typographical, grammar, idiomatic, syntax and etc. Applicants' cooperations are requested in correcting any errors of which applicants may become aware in the specification.

The abstract of the disclosure is objected to because of the inclusion of legal phraseology often used in patent claims such as "comprising" in line 9. Correction is required. See MPEP § 608.01(b).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a). It is unclear whether the limitation(s) recited prior the "comprising" is to be regarded as part of applicants' invention? Applicants should recite claim 1 in Jepson -format (if intended) to delineate that which is an improvement in the art.

b). The claims or at least part of the claims are recited in passive rather than active steps, e.g., the recitation of "by distillation of a crude product" in claim 1; and "by distilling" in claims 3-4.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Decker et al (6,955,744) with or without GB (1,083,910).

Decker et al discloses a process for purifying 2-chloro-5-chloromethylthiazole comprising distilling a crude 2-chloro-5-chloromethylthiazole under reduced pressure in the presence of an oligomeric polyether, wherein the polyether is polyethylene glycol or polypropylene glycol. Note col. 3, lines 8-13. The above compound is deemed to be covered by the formula (I) claimed in claim 1. The process of Decker differs from the claimed invention in that claim 1, for example, recites purifying 2-chloro-5-chloromethyl-1,3-thiazole by treating the crude product with a lower alcohol before distillation. However, Decker's glycol and the claimed lower alcohol all belong to the same family, and must therefore be performing the same functions in the above purification process. Note GB '910 suggesting the alternativeness of the lower alcohol such as e.g., ethyl alcohol with ethylene glycol. Moreover, whether the addition of the agent or solvent is before (as claimed) or during (as in the prior art) distillation is of no patentable moment. The same predictable result is achieved either way, i.e., the chloromethylthiazole is ultimately purified by the distilling process.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 1797

EP '531 discloses the preparation of a chloromethylthiazole –containing- compound.
